

AMAZON DASHBOARD – DAX MEASURES

I. PAGE 1 → Executive Summary

1. Total Sales

Total Sales =

SUM(Orders[Sales])

2. Total Profit

Total Profit =

SUM(Orders[Profit])

3. Total Orders

Total Orders =

DISTINCTCOUNT(Orders[Order ID])

4. Total Quantity

Total Quantity =

SUM(Orders[Quantity])

5. Profit Margin %

Profit Margin % =

DIVIDE(

[Total Profit],

[Total Sales]

)

6. Avg Shipping Days

Avg Shipping Days =

AVERAGEX(

Orders,

DATEDIFF(

Orders[Order Date],

Orders[Ship Date],

DAY

)

)

II. PAGE 2 → Product Analysis

1. Total Products

Total Products =

DISTINCTCOUNT(Orders[Product Name])

2. Total Sales

Total Sales =

SUM(Orders[Sales])

3. Total Profit

Total Profit =

SUM(Orders[Profit])

4. Average Discount

Avg Discount =

AVERAGE(Orders[Discount])

5. Loss Making Product Count

Loss Making Products Count =

```
CALCULATE(  
    DISTINCTCOUNT(Orders[Product Name]),  
    Orders[Profit] < 0  
)
```

6. Highest Profit Product

Top Selling Product =

```
TOPN(  
    1,  
    VALUES(Orders[Product Name]),  
    [Total Sales],  
    DESC  
)
```

III. PAGE 3 → Customer Analysis

1. Total Customers

Total Customers =

```
DISTINCTCOUNT(Orders[Customer Name])
```

2. Repeat Customers

Repeat Customers =

```
COUNTROWS(  
    FILTER(  
        VALUES(Orders[Customer Name]),  
        CALCULATE(DISTINCTCOUNT(Orders[Order ID])) > 1  
    ))
```

3. Avg Order Value

Avg Order Value =

DIVIDE(
[Total Sales],
[Total Orders]
)

4. Customer Retention %

Customer Retention % =

DIVIDE(
[Repeat Customers],
[Total Customers]
)

5. Highest Spending Customer

Highest Customer Sales =

MAXX(
VALUES(Orders[Customer Name]),
[Total Sales]
)

6. Highest Customer Sales

Highest Customer Sales =

MAXX(
VALUES(Orders[Customer Name]),
[Total Sales]
)

IV. PAGE 4 → Shipping & Operations

1. Actual Shipping Days

Actual Shipping Days =

AVERAGEX(

Orders,

DATEDIFF(

Orders[Order Date],

Orders[Ship Date],

DAY

)

)

2. Avg Shipping Days by Mode

Avg Shipping Days by Mode =

AVERAGEX(

Orders,

DATEDIFF(

Orders[Order Date],

Orders[Ship Date],

DAY

)

)

3. Fastest Ship Mode

Fastest Ship Mode =

MAXX(

TOPN(

1,

```

SUMMARIZE(
    Orders,
    Orders[Ship Mode],
    "AvgDays", [Avg Shipping Days by Mode]
),
[AvgDays], ASC
),
Orders[Ship Mode]
)

```

4. Slowest Ship Mode

Slowest Ship Mode =

```

MAXX(
    TOPN(
        1,
        SUMMARIZE(
            Orders,
            Orders[Ship Mode],
            "AvgDays", [Avg Shipping Days by Mode]
        ),
        [AvgDays], DESC
    ),
    Orders[Ship Mode]
)

```

5. On Time Orders

On Time Orders =

```

CALCULATE(
    DISTINCTCOUNT(Orders[Order ID]),

```

```
FILTER(  
    Orders,  
    (  
        Orders[Ship Mode] = "Same Day"  
        &&  
        DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY) <= 0  
    )  
    ||  
    (  
        Orders[Ship Mode] = "First Class"  
        &&  
        DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY) <= 2  
    )  
    ||  
    (  
        Orders[Ship Mode] = "Second Class"  
        &&  
        DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY) <= 4  
    )  
    ||  
    (  
        Orders[Ship Mode] = "Standard Class"  
        &&  
        DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY) <= 7  
    )  
)
```

6. On-Time Delivery %

On Time Delivery % =

DIVIDE(

[On Time Orders],

[Total Orders]

)

7. Late Deliveries

Late Deliveries =

[Total Orders] - [On Time Orders]

OVERALL DAX FORMULA TABLE

Measure Name	Purpose	DAX Formula
Total Sales	Calculates total revenue generated	Total Sales = SUM(Orders[Sales])
Total Profit	Calculates overall profit	Total Profit = SUM(Orders[Profit])
Total Orders	Counts unique customer orders	Total Orders = DISTINCTCOUNT(Orders[Order ID])
Total Quantity	Calculates total quantity sold	Total Quantity = SUM(Orders[Quantity])
Profit Margin %	Calculates profitability percentage	Profit Margin % = DIVIDE([Total Profit], [Total Sales])
Avg Shipping Days	Calculates average delivery time	Avg Shipping Days = AVERAGEX(Orders, DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY))
Total Products	Counts total unique products	Total Products = DISTINCTCOUNT(Orders[Product Name])
Avg Discount	Calculates average discount offered	Avg Discount = AVERAGE(Orders[Discount])
Loss Making Products Count	Counts products generating negative profit	Loss Making Products Count = CALCULATE(DISTINCTCOUNT(Orders[Product Name]), Orders[Profit] < 0)
Top Selling Product	Identifies highest revenue	Top Selling Product = TOPN(1, VALUES(Orders[Product Name]), [Total Sales], DESC)

	generating product	
Highest Profit Product	Identifies most profitable product	Highest Profit Product = TOPN(1, VALUES(Orders[Product Name]), [Total Profit], DESC)
Total Customers	Counts unique customers	Total Customers = DISTINCTCOUNT(Orders[Customer Name])
Repeat Customers	Counts customers with more than one order	Repeat Customers = COUNTROWS(FILTER(VALUES(Orders[Customer Name]), CALCULATE(DISTINCTCOUNT(Orders[Order ID])) > 1))
Avg Order Value	Calculates average revenue per order	Avg Order Value = DIVIDE([Total Sales], [Total Orders])
Customer Retention %	Calculates repeat customer percentage	Customer Retention % = DIVIDE([Repeat Customers], [Total Customers])
Highest Spending Customer	Identifies customer with highest spending	Highest Spending Customer = MAXX(TOPN(1, VALUES(Orders[Customer Name]), [Total Sales], DESC), Orders[Customer Name])
Highest Customer Sales	Shows maximum sales generated by a customer	Highest Customer Sales = MAXX(VALUES(Orders[Customer Name]), [Total Sales])
Actual Shipping Days	Calculates actual delivery days	Actual Shipping Days = AVERAGEX(Orders, DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY))
Avg Shipping Days by Mode	Calculates average shipping time by ship mode	Avg Shipping Days by Mode = AVERAGEX(Orders, DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY))

Fastest Ship Mode	Identifies fastest shipping method	Fastest Ship Mode = MAXX(TOPN(1, SUMMARIZE(Orders, Orders[Ship Mode], "AvgDays", [Avg Shipping Days by Mode]), [AvgDays], ASC), Orders[Ship Mode])
Slowest Ship Mode	Identifies slowest shipping method	Slowest Ship Mode = MAXX(TOPN(1, SUMMARIZE(Orders, Orders[Ship Mode], "AvgDays", [Avg Shipping Days by Mode]), [AvgDays], DESC), Orders[Ship Mode])
On Time Orders	Counts orders delivered within expected SLA	`On Time Orders = CALCULATE(DISTINCTCOUNT(Orders[Order ID]), FILTER(Orders, ((Orders[Ship Mode] = "Same Day" && DATEDIFF(Orders[Order Date], Orders[Ship Date], DAY) ≤ 0)
On-Time Delivery %	Calculates percentage of on-time deliveries	On Time Delivery % = DIVIDE([On Time Orders], [Total Orders])
Late Deliveries	Counts delayed shipments	Late Deliveries = [Total Orders] - [On Time Orders]

Extra: Formula For Creating a Custom Calendar in Power Query

List.Dates(#date(2015,1,1), Duration.Days(#date(2018,12,31)-#date(2015,1,1))+1,
#duration(1,0,0,0))
